

QUESTION	ANSWER
----------	--------

## Quiz Cards: Using resources (Chemistry)

### How to use the quiz cards to learn the key facts

- 1) Take 6 quiz cards at a time and read through them
- 2) Cover up the answer side of the page.

Question	Answer
----------	--------

- 3) Take the first quiz card and ask yourself the question. Either write the answer down or say it out loud.
- 4) Check your answer using the answer side of the card.
- 5) Do this question again until you get it right.
- 6) Repeat the process for the second question.
- 7) Before going onto the third question repeat question one and two.
- 8) When you have gone through all of the questions try and do them in a random order to really test your knowledge.

### **ONCE YOU HAVE LEARNT THEM ALL ....**

- 9) Complete some exam questions to apply your knowledge.
- 10) Check your answer with the mark scheme and correct any errors in green pen.
- 11) Repeat steps 9-10 until you get the answers correct all of the time.

QUESTION	ANSWER
<b>What</b> do we use the Earth's resources for?	Warmth, shelter, food and transport.
<b>What</b> do resources provide?	Food, timber, clothing and fuels.
<b>Why</b> is chemistry important to agriculture and industry?	Provides new products and in sustainable development
<b>What</b> is sustainable development?	Development that meets the needs of current generations without compromising the ability of future generations to meet their own needs.
<b>What</b> should drinking water have to be safe?	Sufficiently low levels of dissolved salts and microbes.
<b>What</b> is portable water?	Safe drinking water  Potable water is not pure water in the chemical sense because it contains dissolved substances.

QUESTION	ANSWER
<p><b>What</b> sterilising agents are used for portable water?</p>	<p>Chlorine, ozone or ultraviolet light.</p>
<p><b>What</b> can we do if supplies of fresh water are limited?</p>	<p>Desalinate salty water or sea water</p>
<p><b>How</b> can desalination be done?</p>	<p>Distillation or by processes that use membranes such as reverse osmosis.</p>
<p><b>What</b> is a disadvantage of desalination?</p>	<p>Requires large amounts of energy</p>
<p><b>How</b> do we create portable water?</p>	<ul style="list-style-type: none"> <li>• choosing an appropriate source of fresh water</li> <li>• passing the water through filter beds <ul style="list-style-type: none"> <li>• sterilising.</li> </ul> </li> </ul>
<p>In the UK <b>what</b> is the main source of water?</p>	<p>Rain provides water with low levels of dissolved substances (fresh water) that collects in the ground and in lakes and rivers.</p>

QUESTION	ANSWER
<p><b>What</b> must happen to all waste water before being put into the environment?</p>	<p>Be treated.</p>
<p><b>What</b> happens during sewage treatment?</p>	<ul style="list-style-type: none"> <li>• screening and grit removal</li> <li>• sedimentation to produce sewage sludge and effluent</li> <li>• anaerobic digestion of sewage sludge               <ul style="list-style-type: none"> <li>• aerobic biological treatment of effluent.</li> </ul> </li> </ul>
<p><b>What</b> must be removed from sewage and agricultural and industrial waste?</p>	<p>Organic matter and harmful microbes</p>
<p><b>How</b> can we extract low grade copper ores?</p>	<p>Phytomining, and Bioleaching.</p>
<p><b>Why</b> are Phytomining, and Bioleaching better than mining?</p>	<p>They don't need the moving and disposing of large amounts of rock</p>
<p><b>What</b> is Phytomining?</p>	<p>Using plants to absorb metal compounds. The plants are harvested and then burned to produce ash that contains metal compounds.</p>

QUESTION	ANSWER
<b>What</b> is Bioleaching	Using bacteria to produce leachate solutions that contain metal compounds.
<b>How</b> can copper be extracted from the metal compounds formed in Phytomining or Bioleaching?	Using solutions of copper compounds and then using displacement with scrap iron or by electrolysis
<b>What</b> are life cycle assessments?	Assess the environmental impact of products
<b>When</b> are life cycle assessments used?	<ul style="list-style-type: none"> <li>• extracting and processing raw materials</li> <li>• manufacturing and packaging</li> <li>• use and operation during its lifetime <ul style="list-style-type: none"> <li>• disposal at the end of its useful life, including transport and distribution at each stage.</li> </ul> </li> </ul>
<b>What</b> is the problem with selective LCAs?	These can be misused to reach pre-determined conclusions, eg in support of claims for advertising purposes
<b>Why</b> do Metals, glass, building materials, clay ceramics and most plastics pose a problem?	<p>Much of the energy for the processes comes from limited resources.</p> <p>Obtaining raw materials from the Earth by quarrying and mining causes environmental impacts.</p>

QUESTION	ANSWER
<p><b>How</b> can we help solve this problem?</p>	<p>Metals can be recycled by melting and recasting or reforming into different products.</p> <p>Some products, such as glass bottles, can be reused.</p>
<p><b>Why</b> does reusing and recycling materials help?</p>	<p>Reduces the use of limited resources, use of energy sources, waste and environmental impacts</p>
